jsign

Introducing Consensus jSign Electronic Signature Solution for Business and Enterprise

Easily integrate eSignature workflows into your existing applications and document process - without the high costs.

Consensus jSign with blockchain technology provides a novel way for implementing eSignatures capability into document workflows. Blockchain is perfectly suited for eSignature workflows, providing superior audit trail, non-repudiation protection, and tamper-proofing documents. The UETA compliant solution lets users request signatures, capture signatures, send signed documents, and track the entire process through notifications.

As a business solution designed from the ground up with security and compliance in mind, jSign can stand up to legal scrutiny, meeting the ESIGN ACT definition for electronic signing. To ensure non-repudiation, Consensus jSign captures the signer's intent and provides an audit trail with timestamps of the entire signature ceremony, including IP, browser, device and location of signers for each document. Then, save your files with jSign or your preferred cloud storage.

Consensus jSign is offered and supported in essential and business tiers, as well as custom and enterprise solution sets. Visit jsign.com for more information.

jSign for SMB and jSign Enterprise Solutions are HIPAA compliant and meet Code of Federal Regulations (CFR) requirements for medical workflows. Key features include:

- ☑ Send requests to sign your key documents
- ☑ Create a solid audit trail & prevent signature tampering with blockchain technology
- ☑ Build unique signature processes for your unique workflows out of the box, or with APIs
- ☑ User management, reporting, and analytics
- ☑ Configure two-factor authentications through mobile number & email
- ☑ Set geolocation restrictions to manage jurisdictions
- ☑ Track the entire signature process, get updates, and a certificate of completion
- ☑ Customize signature fields with your own branding
- ☑ Build business rules, such as choosing between sequential or parallel signing order
- ☑ Set due dates and send reminders

- ☑ Save signed documents in the jSign cloud for easy reference
- ☑ Integrated with Dropbox and Google Drive for easy storage
- ☑ Supports popular file formats: doc, .docx, .pdf, .xls, xlsx, .txt .ppt, .pptx, jpg, .bmp, .png.
